

SECURE VALUABLE DATA WITH ON-LOCATION DIGITAL CONTAINMENT

Mobile device forensics is a rapidly evolving field with an increasing prevalence of mobile devices in a wide variety of cases. Investigators can find stolen data, incriminating communications and more on electronic devices. Mobile devices can contain details about who was doing what, where and when, so their usefulness as a source of information and evidence in an investigation is important.

As the size and shape of wireless devices evolve and expand, it becomes paramount to properly identify, contain and control their signals. Select-A-Shield products are an ideal solution for mobile device forensics, cyber forensics, secure facilities, SCIFS, and government facilities.

It is the responsibility of the examiner during their investigation to maintain the credibility of any evidence that may be contained in a wireless device. SELECT's RF Isolation Solutions block the ability of wireless portable electronic devices to access or transmit signals that can potentially erase or corrupt important evidence.

Select-A-Shield Forensic Enclosures

SELECT offers three standard portable RF shielded enclosures for use in digital forensics device containment and secure extraction.

Fast & Secure Evidence Collection

The Select-A-Shield USB Pouch works with any portable electronic device with capacitive sensing touch screens and connects to any forensic extraction device.

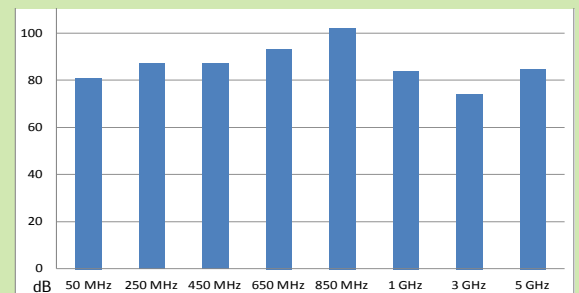

SELECT-A-SHIELD ASSURANCE

Look for the SELECT green shield as your assurance for optimum protection.

Select-A-Shield RF/EMI Shielding USB Pouches are US made with a double layer conductive silver/copper/nickel RoHS compliant material. The pouch has been tested and yields better than -75 dB, 99.95% RF Isolation from 500MHz to 6.0GHz.

Select-A-Shield™ Forensic Products

RF/EMI SHIELDING POUCHES

Select-A-Shield RF/EMI Shielding Pouches block portable electronic devices from accessing active wireless networks.

RF/EMI SHIELDING USB POUCHES

More affordable than lab based non-portable metal enclosures, SELECT's USB Forensic Pouch allows for hands-on

manipulation of wireless devices in the field.

RF/EMI SHIELDING ENCLOSURES

Select-A-Shield forensic portable enclosures block electronic devices from accessing active wireless networks.

ENDLESS RANGE OF SHIELDING SOLUTIONS

No matter what your forensic shielding need or configuration requirements, SELECT has the widest array of solutions at maximum isolation. Products range from RF/EMI shielding curtains; to portable room and tabletop enclosures to small pouches in flexible, rigid and unique shapes.

DEVICE CONTAINMENT FOR FACILITIES AND FORENSICS

Lightweight and flexible, Select-A-Shield forensic pouches are manufactured using SELECT's proprietary Silver/Copper/Nickel conductive fabric. Utilizing a double layer construction and conductive closure, these pouches are the right choice for capturing and containing any wireless communication devices including cell phones, smartphones, PDAs, tablets, GPS units, and laptop computers.

- Reusable. Conductive material will maintain shielding performance for hundreds of captures.

- Double layer conductive fabric with optional sport nylon covering
- Prevent electronic devices from logging on to active networks
- Field tests have shown an 99.99% average signal attenuation
- Standard sizes for many electronic devices are available.
- Custom sizes from 1.5" x 3" to 48" x 48" can be designed to fit your needs.
- **Options:** Clear evidence tag pocket, RF shielding window for ventilation and/or visibility, and custom I/O connector plates

ON-SITE MOBILE EXTRACTION

Select-A-Shield USB Pouches make sure internal data is not compromised from moment of capture. With the see-through soft material window and the USB 2.0 connection, there is no need to take the captured device back to the laboratory to view the internal memory.

- The patent-pending USB 2.0 connector

provides fast and secure evidence collection.

- Works with any portable wireless device including Smartphones, Tablets, and GPS units.
- The kit comes complete with internal foam insert and a handy carrying case.

MOBILE ENCLOSURES OFFER OPTIMUM PROTECTION IN A LIGHTWEIGHT, EASY TO ASSEMBLE STRUCTURE

Portable enclosures provide economical, on site versatility at a fraction of the cost of fully welded metal enclosures. Select-A-Shield enclosures deliver a solution that is truly portable with on-the-fly setup. Easy to assemble, these mobile enclosures are the right choice for isolating multiple wireless communication devices including cell phones, smart phones, PDAs, tablets, GPS units, and laptop computers.

- Enclosure: Manufactured using SELECT's Nova Select conductive fabric and exclusive, patent pending door system.
- Double Layer Enclosure -78 dB average shielding effectiveness from 150 kHz to 18 GHz

- Single Layer Enclosure SE: -66 dB average shielding effectiveness from 150 kHz to 18 GHz
- Floor: Two layers of heavy-duty black tarp protect the conductive floor.
- Cable Sleeve: Includes one shielded cable sleeve for nonconductive cable insertion or attachment point for RF filtered grounding box.
- Enclosure Storage Bag: All enclosures come standard with a storage bag for protection when in transit or not in use.
- **Options:** ESD white interior liner; transport bag or case; interior lighting; ventilation and A/C; shielding effectiveness testing & report; standard and custom IO Filter Plates for power and data; filter boxes
