

## 6 Meter Lightweight Tactical Mast

The RSM-6 is a lightweight, man-portable tactical mast ideal for elevating lightweight/wire antennas for short to medium term tactical base station or forward command communications applications. Although designed specifically as companion mast for the TAC-HF Wideband Dipole Antenna or RDA30-90 VHF Wire Discone Antenna, the RSM-6 is suitable for use with any lightweight, low wind area antenna.

Featuring the compact convenience of a telescopic mast, without the disadvantages associated with jamming through excessive sand/dust and water penetration, and high wear and tear, the lightweight fiberglass sections fit inside one another for compact storage and transport.

The RSM-6 is packed complete with all accessories, baseplate, guy ropes, mallet, anchor pegs and carry bag, and is easily deployed by one person in less than 5 minutes.

### Specifications

Erected length	6M
Packed length	1.1M
Diameter	60mm
Weight	3.7Kg (mast only) 4.9Kg with accessories
Wind survival	120 Km/H (160 Km/H gusts)
Headweight	6Kg
Top Dia. (for antenna mount)	1" (25.4mm)
Environmental	MIL-STD-810F
